Invisalign Braces

The Ins and Outs of Invisalign®

Invisalign is the orthodontic alternative to braces. Instead of wearing fixed brackets, Invisalign offers a series of clear, removable aligners that straighten your smile gradually over time. But unlike fixed braces, Invisalign offers the freedom to be able to remove the aligners to eat, drink, brush and floss – helping to maintain optimal oral health.

Invisalign can help correct a variety of orthodontic issues, including:

- Overly crowded teeth
- Underbite
- Overbite
- Openbite
- Widely spaced teeth

Why Invisalign?

In today's ever-increasing aesthetically-obsessed world, it's so important for self-confidence that you look and feel your best. Wearing nearly invisible braces can help you achieve the goals you have for your smile without feeling like you've stumbled back into high school. No one will ever know that you're wearing your aligners (not unless you tell)!

3-D at its Finest

To get started, we'll map out a treatment plan using a computerized 3-D image of your teeth. This amazing technology allows us to see a virtual representation of your smile before, during and after completing treatment. This way, you will be well-prepared to begin treatment with Invisalign.

Dollars & Cents

When you come in for an Invisalign consultation, we'll discuss all the options you have for your Invisalign treatment. The good news is that Invisalign is often covered under your dental insurance. And of course, we'll go over insurance, co-payments and/or financing before beginning any treatment.

Call us today and see if Invisalign is right for you.

Dental Braces

Your smile is the first thing people see. And as we all know, first impressions are crucial. So if you've ever wished for a straighter smile — braces might be for you.

But braces don't just improve the look of your teeth; they also keep your teeth healthy. When your teeth are straight, they are easier to keep clean. Flossing, brushing and mouthwash are much more effective when your teeth aren't overly crowded.

At our office, we have different options to fit each patient — come in for a consultation and together we'll decide what's right for you.

It's never too late to straighten your smile. Adults and teenagers alike can get the smile they've always wanted. Call us today and improve your face value!!!
