Teeth Whitening

Today's teeth whitening treatments are so easy, convenient and affordable that they've become a regular part of everyone's beauty routine. If you haven't tried one yet, you'll be happy to know that you have plenty of choices. For the fastest, most dramatic results, consider laser teeth whitening. Laser teeth whitening treatments take just an hour and can whiten teeth up to 10 shades. If you're the do-it-yourself type, an at-home teeth whitening kit might be right for you. These professional grade teeth whitening kits produce excellent results over a longer period of time. They can be purchased from your dentist or over-the-counter, but for best results, it's recommended that you always consult with a dentist before trying any over-the-counter teeth whitening system.

Porcelain Veneers

Years ago, smile makeovers involved multiple dental treatments over a period of several months. That's no longer the case, thanks to porcelain veneers. Porcelain veneers are ultra thin shells made of translucent porcelain that can be bonded to your teeth for cosmetic purposes. Extremely versatile and durable, porcelain veneers are an excellent option whether you want a total smile makeover or need to cover a chipped tooth, mask a cracked tooth, or close gaps between your teeth. They require little to no prepping and can often be applied in just one dental visit!

Cosmetic Dental Bonding

Cosmetic dental bonding is a versatile and affordable way to improve the appearance of chipped teeth, stained teeth and gapped teeth. As one of the most conservative cosmetic dentistry treatments around, cosmetic dental bonding requires little to no prepping and preserves most of the natural tooth structure. And it's fast, too! Dental bonding usually takes just one visit to complete.

Smile Makeover

Tired of masking your smile because you don't like the way your teeth look? A smile makeover can be a big boost to your confidence and self-esteem. With a total smile makeover, chipped teeth, cracked teeth, gapped teeth, crooked teeth, stained teeth and gapped teeth can be completely transformed into the smile of your dreams. This is done through a combination of restorative and cosmetic dental treatments, including white fillings, cosmetic dental bonding, porcelain veneers, cosmetic dental crowns, dental braces, dental bridges and dental implants.

Porcelain Dental Crowns

Although dental crowns can be made of a variety of materials, including stainless steel, gold and silver, nothing looks better than a porcelain dental crown. Porcelain dental crowns match the natural color of your teeth and are virtually undetectable by the naked eye. And because they're metal-free, porcelain dental crowns are an excellent option for patients with metal allergies. Best of all, porcelain crowns don't just look beautiful – they're long-lasting, too!

Lumineers

Are you a candidate for veneers? Yes. LUMINEERS BY CERINATE are the biggest breakthrough ever in achieving the smile that you've always wished for. These contact lens-thin "smile shapers" are so thin, yet so strong, that there is no need for the removal of any sensitive tooth structure, no shots, no drilling, and therefore, NO PAIN. No matter what your problem is, LUMINEERS are the perfect solution to your smile issues!
